

Seungsu Lee

SYSTEM SOFTWARE ENGINEER

✉ soulist77@gmail.com | 🏠 sslee0000.github.io | 💻 [sslee0000](#) | 🔗 [LinkedIn](#)

Education

Seoul National University(SNU)

Seoul, Korea

M.S. IN COMPUTER SCIENCE AND ENGINEERING

Mar. 2019 - Feb. 2021

- Thesis: Real-time System Optimization of DAG Task Model Considering Applicability
- Real-Time Ubiquitous Systems Laboratory
- Advisor: Prof. Chang-Gun Lee
- GPA: 3.94/4.3

Korea University

Seoul, Korea

B.E. IN ELECTRICAL ENGINEERING

Mar. 2013 - Feb. 2019

- Aug. 2015 - Aug. 2017, Mandatory Military Service.
- GPA: 3.98/4.5

Hana Academy Seoul(Hana High school)

Seoul, Korea

Mar. 2010 - Feb. 2013

Research Interest

Real-Time Systems / System Software Platforms / Autonomous Driving / Workload Profiling & Optimization

Work & Research

Naver Labs

Bundang-gu, Seongnam-si,

Gyeonggi-do, Korea

SYSTEM SOFTWARE ENGINEER

Apr. 2022 - Now

- **P1 Street View Mapping Vehicle Platform** (Official Project Page)
Migrated the mapping data-collection vehicle behind NAVER Map Street View from stock Ubuntu to a custom Yocto-based OS image with read-only rootfs and A/B redundancy, refactoring the system layers and codebase; redesigned the vehicle-control orchestrator as an explicit state machine, reducing startup time by about 44%. Hardened the capture-device control software with systematic exception handling and stabilized time synchronization across heterogeneous sensors (camera, LiDAR, GPS) that stream in different formats and at different rates, a prerequisite for downstream sensor fusion, making field data collection dependable; brought the platform to service-level quality through on-vehicle validation and security hardening. (See the result live on NAVER Map)
- **ALT-B Autonomous Shuttle** (Official Project Page)
Developed vehicle control, sensor, and UI device drivers; designed and operated the in-vehicle network; integrated new hardware modules into the running system; analyzed field failures down to root cause across storage, network, and application layers.
- **Release Engineering & Operations**
Formalized the team's release process (versioning and branching strategy) and operated regular releases.
- **Multi-board Yocto Platform for Robotics**
Built Yocto OS images for various boards (e.g., NVIDIA Orin) used in robot projects; ported vendor-provided peripheral drivers into the Yocto environment at the kernel level (e.g., an Ubuntu camera driver).
- **Real-Time Linux Research**
Studying PREEMPT_RT-based real-time Linux and scheduling with observability tools (rtla, timerlat, cyclictst) for next-generation platforms.

- **PreemptRT Patch Support**

Understanding the PreemptRT Patch characteristics and measuring the achievable scheduling latency gain.

- **PCIe Device Driver**

Developing and bring up Linux Kernel Driver.

- **Enhancement of Code Coverage**

Configure VectorCAST-based environment and improve code coverage.

- **Debugging with Trace32**

Debugging in RAMDUMP and target image using Trace32 and iTSP.

- **Building Test Automation Environment**

Configuration of test automation environment.

Real-Time Ubiquitous Systems Laboratory, SNU

GRADUATE RESEARCHER(M.S.)

Seoul, Korea

Jan. 2019 - Feb. 2021

- Advisor: Prof. Chang-Gun Lee

- **Autonomous Driving System Optimization Research on Embedded Boards**

To minimize hardware computing unit cost and software development cost, we build automotive system using embedded board and open source. After analyzing the resource usage behavior measured by the profiling tool, an optimization algorithm is devised to ensure the real-time execution of the task. (Summarized Picture Linked)

- **ROS Profiling Tool Research**

Understanding the structure and characteristics of ROS and finding the reason why resource usage was not accurately known in the existing profiling tool. Through this, the ROS-based resource use profiling tool is developed. (Summarized Picture Linked)

- **Building an Autonomous Driving Experiment Platform With Embedded boards**

For scheduling and optimization research, an autonomous driving experiment platform was built in two places: an RC car(1/10 the size of a real car) and a real car. (Summarized Picture Linked)

- **Optimal Task Parallelization Research**

Targeting Global-EDF scheduling, research on a conditional optimal algorithm for parallelizing tasks with parallelization freedom. (Summarized Picture Linked)

- **ROS Lectures for New Members**

Create ROS lectures for new members on Youtube(linked).

Advanced Control Systems Laboratory, Korea University

UNDERGRADUATE RESEARCHER

Seoul, Korea

Nov. 2017 - Sep. 2018

- **Autonomous Driving Study**

Studying autonomous driving topics regularly in undergraduate study groups.

Topics: autonomous driving level, sensors(GPS, LiDAR), linear algebra, image preprocessing

Publication

INTERNATIONAL CONFERENCE

Honors & Awards

SNU-SEC Semiconductor Special Education Program(SSSP)

FULL SCHOLARSHIP

Samsung Electronics

Mar. 2019 - Feb. 2021

- Funded full-tuition scholarship with stipend for graduate studies by Samsung Electronics(SEC)

Academic Excellence Scholarship

PARTIAL SCHOLARSHIP

SNU

Mar. 2019 - Aug. 2019

- Funded one semester tuition scholarship for graduate studies by Seoul National University(SNU)

The National Scholarship for Science and Engineering

FULL SCHOLARSHIP

KOSAF

Mar. 2013 - Feb. 2019

- Funded full-tuition scholarship for undergraduate studies by Korea Student Aid Foundation(KOSAF)

President's List

OUTSTANDING SEMESTER GRADES

Korea University

Spring & Fall 2013, Spring 2018

- Received a citation for academic excellence in semester

The Commissioner's Citation

EXEMPLARY SERVICE OF SOCIAL WORK PERSONNEL

Seoul RMMAO

Aug. 2017

- Selected as an Exemplary Service of Social Work Personnel by performing military service with a strong sense of mission and responsibility at Seoul Regional Military Manpower Administration Office(Seoul RMMAO)

Experience

TEACHING

2020	Teaching Assistant, M1522.000700: Logic Design	<i>SNU</i>
2019	Teaching Assistant, M1522.000700: Logic Design	<i>SNU</i>
2019	Teaching Assistant, 400.320: Engineering Research Practice 1 (Undergraduate Research Opportunities Program)	<i>SNU</i>

ATTENDING CONFERENCE/WORKSHOP

Dec. 2024	Participant, IEEE Real-Time Systems Symposium (RTSS)	<i>York, United Kingdom</i>
Oct. 2023	Participant, IEEE/RSJ International Conference on Intelligent Robots and Systems (IROS)	<i>Detroit, Michigan, USA</i>
Dec. 2019	Participants, Korea Software Congress	<i>Pyeongchang, Republic of Korea</i>
Aug. 2019	Teaching Assistant, Autoware Workshop	<i>Chung-ang Univ., Republic of Korea</i>
Jul. 2019	Participants, Conference on Ph.D Research in Microelectronics and Electronics	<i>Lausanne, Switzerland</i>
Jul. 2019	Participants, International Conference on Transportation Information and Safety	<i>Liverpool, UK</i>
Jun. 2019	Poster Presenter, Korea Computer Congress	<i>Jeju, Republic of Korea</i>

Extracurricular Activity

The KorMent Program

MENTEE

KOSAF

Mar. 2015 - Nov. 2015

- Participated in mentoring to learn wisdom, leadership and spirit of service from the mentor
- Mentor: Hanho Kim(Former Vice President of Hewlett-Packard Korea)

Skills

Languages	Korean(Native), English(OPIc: IH, certification expired)
Programming	C/C++, Python, Shell Script
Systems	Linux, Yocto, Docker, Robot Operating System(ROS)/Autoware, PREEMPT_RT, A/B OTA
Profiling & Tools	perf, ftrace, kernelshark, Wireshark, rta/cyclicttest, Git, Jenkins, Gerrit, LaTeX
AI-Assisted Dev	Claude Code, OpenAI Codex; spec/test-driven prompting, agentic build & test workflows, review of generated code
